WASTEBASKETS

Floor-standing wastebasket

Steelwall

Description: Self-supporting, curved fronts and flat side panels made of stainless steel, secured with an internal construction of galvanized steel, provide great stability. The tops funnel-shaped openings guide waste into the inner liners and are also an elementary part of the fire protection (patented and certified). The slanted top prevents the use as storage space.

Safety: The galvanized inner liners are sealed by a patented system. In the event of a fire, the rising smoke gases collect below the funnel-shaped openings. The resulting gas cushion interrupts the oxygen supply and a self-extinguishing effect occurs. In addition, the construction (inner liners / outer body) minimizes the increase in temperature at, above and below the casing in the event of fire. A snap lock protects the receptacle against unauthorized access.

Handling: One-sided operability and allows convenient dropping of the waste without hindrance through flaps. Easy and quick removal of the waste bags from above. The lid is automatically swung upwards by means of a gas spring after the lock is operated (1/4 turn). The contents are now visible and the waste bags can be exchanged as required.
