Floor standing bin with information area 71511

Description: Self-supporting, curved, powder-coated galvanized steel outer walls, connected to stable flat side panels. Curved door with recessed lock (a key is supplied with each container). The door retention profile prevents the hinges from overstretching. A curved cover is firmly connected to the structure. The shape of the cover results in reduced height from two sides. A sturdy insertion ring guides waste into the inner liner.

Safety: The curved cover serves as rain protection without providing a storage area. At the same time, the opening is reduced, which minimizes the disposal of household refuse bags. Snap locks protect the bins against unauthorized access.

Handling: Use the square key to operate (1/4 turn) the embedded snap lock and open the door. Pull out / lift out inner liner. The contents are now visible and the waste bag can be replaced as required. The snap lock allows the door to be closed and locked without a key.

Handling of the information areas: Use an Allen wrench to loosen the screws on the frame. The content of the frame can now be changed.

Cleaning: The powder-coated galvanized steel surface makes the boxes easy to clean and maintain. Commercial care products for powder-coated materials are sufficient.
